

Additional Guidance from Central Office for Lane Closure Variations

1. Please include information to help explain the proposed construction. Provide clear language as to whether the request is for a single- or double-lane closure.
 - a. Please provide the Typical Section Package.
 - b. Please provide any relevant Temporary Traffic Control Plan sheets.
2. Please include backup data for and excessive congestion in morning and/or afternoon peak periods. Is there documented observations of traffic levels and/or queue lengths when this occurs? Pictures?
3. Please discuss whether alternative designs or approaches were considered and include this in the narrative.
4. Using the Production Rates found on the Office of Construction's website, please evaluate how many days of construction would be needed if lane closures were all 10-hours long. This should be compared to the number of days of construction needed if lane closures were as proposed in the Variation Request (some periods < 10 hours). Please include this information in the narrative.
5. Please work with your District Construction Office to reach out to some industry partners (contractors) in your district to get their input on the proposed (< 10 hour) lane closure periods and include this feedback in the submittal.
6. If there is any other relevant communication or coordination related to this lane closure request, please be sure to include this in the submittal package.
